

Our Equity Funds Added Value Versus Passive Peers

Our strategic investing approach has benefited clients over the long term.

Our research shows that over the past 20 years, T. Rowe Price’s equity funds have consistently outperformed comparable passive funds over various time windows—even after fees and expenses are taken into account. This relative strength was especially notable over longer rolling periods.

Through the market’s ups and downs, we have remained committed to our strategic investing approach, which focuses on rigorous research and prudent risk management.

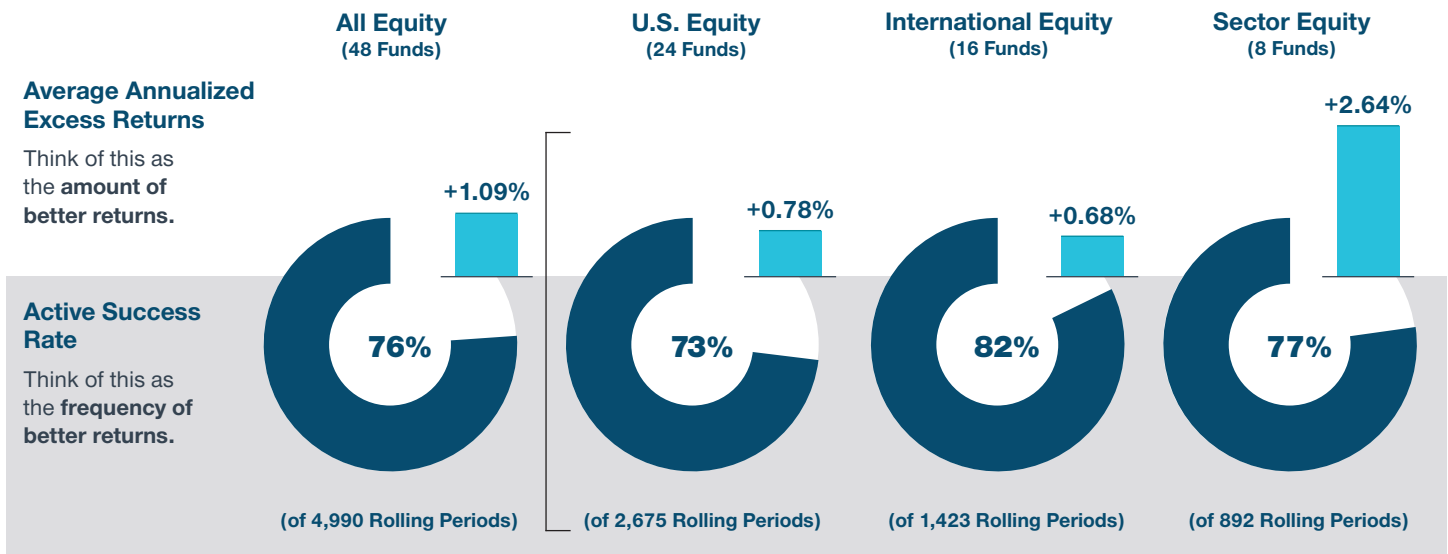

1.09%

is the average annualized excess returns (net of fees) posted by our equity funds across rolling 10-year periods.

Our Equity Funds Consistently Outperformed Comparable Passive Peers¹

**RESULTS SHOWN AFTER
FEES AND EXPENSES**

(Fig. 1) 10-year periods, rolled monthly, from July 1, 2002, to June 30, 2022

View standardized returns and other information about the funds in this analysis starting on page 3. For more information on the methodology of this analysis, please visit [troweprice.com/performancestudy](https://www.troweprice.com/performancestudy). Past performance is no guarantee of future results.

Sources: T. Rowe Price and Morningstar (see Additional Disclosure).

¹ Analysis by T. Rowe Price. Comparable passive funds are (1) mutual funds and exchange traded funds classified as “index fund” in the Morningstar Direct database and (2) in the same Morningstar category as the T. Rowe Price active funds being analyzed. The performance of the T. Rowe Price active funds was compared against the comparable passive funds using 10-year rolling monthly periods from July 1, 2002, to June 30, 2022. The analysis was conducted at the Morningstar category level analyzing all open-end funds and exchange-traded funds (ETFs) within U.S. Morningstar categories where passive funds are present. Oldest share class returns are used for analysis.

Active Success Rates

The active success rate records the percentage of rolling periods in which an actively managed T. Rowe Price fund's returns beat its relevant passive returns average, net of fees and expenses, over a specified rolling time window (say, 10 years).¹ Think of this as the frequency of better returns.

Excess Returns

For each rolling period, the passive returns average was subtracted from each T. Rowe Price fund's return, yielding an excess return. All returns are net of fees and expenses.

RESULTS SHOWN AFTER FEES AND EXPENSES

To provide a clear picture of our performance, we take fund fees and expenses into account when we report returns.

¹ The study spanned the 20 years up to the end of June 2022 for older, actively managed T. Rowe Price funds, or since inception for newer ones, and measured performance net of fees and expenses. We used the oldest share class for each fund. Each T. Rowe Price fund's performance was measured against the equally weighted average of the returns posted by the oldest share class of the index funds in its Morningstar category (passive returns average). Fund performance was measured against the relevant passive returns average over 1-, 3-, 5-, and 10-year horizons, rolled monthly.

² As of June 30, 2022.

³ As of December 31, 2021. Investment staff includes 137 portfolio managers, 24 associate portfolio managers, 204 investment analysts, 71 associate analysts, 29 specialty analysts, 34 traders, 12 strategists, and 22 senior managers.

Our Equity Funds Added Value Compared With Passive Peers

Figure 1 shows that, in keeping with our focus on the long term, T. Rowe Price equity funds outperformed their relevant passive returns average over 10-year periods, rolled monthly. The active success rate exhibited by our equity funds highlights the frequency with which our funds generated better returns over this rolling time frame. (Also see the Active Success Rates sidebar.)

This relative strength extended to shorter rolling periods as well.¹ Our equity funds generated higher average annualized returns, after fees and expenses,

76% Active Success Rate

Our equity funds outperformed in 3,785 of the 4,990 rolling 10-year periods analyzed.

compared with their passive returns averages over the 1-, 3-, and 5-year windows that we examined. The frequency of these higher returns also stood out, with our equity funds achieving active success rates of almost 60% or more across these rolling periods.

Relative Strength Across Our U.S., International, and Sector Funds

T. Rowe Price U.S., international, and sector equity funds posted positive average annualized excess returns (see Excess Returns sidebar) for the longest time window in our study and generated better returns in more than 70% of these rolling 10-year periods. Across each sub-asset class, our funds outperformed for the 1-, 3-, and 5-year time windows and did so in a majority of the rolling periods therein.¹

Our Strategic Investing Approach

We attribute this success to our strategic investing approach, which involves careful stock selection and rigorous research. Our skilled portfolio managers have deep experience—an average of 22 years in the industry and 16 years with T. Rowe Price.² More than 525 of our professionals³ meet regularly with management teams, issuers, experts, and policymakers to conduct due diligence on existing holdings and potential investments. Their unique insights are shared and debated across our extensive global team of investment professionals. We believe that this culture of collaboration across regions and asset classes, coupled with our expanded macroeconomic and quantitative capabilities, gives our investors a multifaceted view of potential risks and opportunities.

Our extensive study outlines how our strategic investing approach has added value for investors when compared with our passive peer group, even after fees and expenses.

Call 1-800-225-5132 to request a prospectus or summary prospectus; each includes investment objectives, risks, fees, expenses, and other information that you should read and consider carefully before investing.

Past performance is no guarantee of future results. All investments are subject to risk, including the possible loss of principal. Results from other time periods may differ. Active investing may have higher costs than passive investing and may underperform the broad market or passive peers with similar objectives. Passive investing may lag the performance of actively managed peers as holdings are not reallocated based on changes in market conditions or outlooks on specific securities.

These ETFs are different from traditional ETFs.

Traditional ETFs tell the public what assets they hold each day. These ETFs will not. This may **create additional risks** for your investment. For example:

- You may have to pay more money to trade the ETF's shares. These ETFs will provide less information to traders, who tend to charge more for trades when they have less information.
- The price you pay to buy ETF shares on an exchange may not match the value of the ETF's portfolio. The same is true when you sell shares. These price differences may be greater for these ETFs compared to other ETFs because it provides less information to traders.
- These additional risks may be even greater in bad or uncertain market conditions.
- These ETFs will publish on its website each day a "Proxy Portfolio" designed to help trading in shares of the ETFs. While the Proxy Portfolio includes some of the ETF's holdings, it is not the ETF's actual portfolio.

*The differences between these ETFs and other ETFs may also have advantages. By keeping certain information about the ETF secret, these ETFs may face less risk that other traders can predict or copy its investment strategy. This may improve the ETF's performance. If other traders are able to copy or predict the ETF's investment strategy, however, this may hurt the ETF's performance.

For additional information regarding the unique attributes and risks of these ETFs, see the fund's prospectus.

Performance data quoted represents past performance and does not guarantee future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and shares, when sold, may be worth more or less than their original cost. Market returns are based on the midpoint of the bid/ask spread as of 4 p.m. ET and do not represent returns an investor would receive if shares were traded at other times. To obtain the most recent month-end performance, visit [troweprice.com](https://www.troweprice.com).

These ETFs are different from traditional ETFs. See the prospectus for additional information about these ETFs.

ETFs are bought and sold at market prices, not NAV. Investors generally incur the cost of the spread between the prices at which shares are bought and sold. Buying and selling shares may result in brokerage commissions which will reduce returns.

¹ As of the most recent prospectus.

INVEST WITH CONFIDENCESM

T. Rowe Price focuses on delivering investment management excellence that investors can rely on—now and over the long term.

Important Information

Call 1-800-225-5132 to request a prospectus or summary prospectus; each includes investment objectives, risks, fees, expenses, and other information you should read and consider carefully before investing.

This material is provided for informational purposes only and is not intended to be investment advice or a recommendation to take any particular investment action.

The views contained herein are those of the authors as of June 2022 and are subject to change without notice; these views may differ from those of other T. Rowe Price associates.

Risks: All investments are subject to risk, including the possible loss of principal. Investing in sector funds can involve more risk and volatility compared to more diversified funds. International investments can be riskier than U.S. investments due to the adverse effects of currency exchange rates, differences in market structure and liquidity, as well as specific country, regional, and economic developments. These risks are generally greater for investments in emerging markets.

This information is not intended to reflect a current or past recommendation concerning investments, investment strategies, or account types; advice of any kind; or a solicitation of an offer to buy or sell any securities or investment services. The opinions and commentary provided do not take into account the investment objectives or financial situation of any particular investor or class of investor. Please consider your own circumstances before making an investment decision.

Information contained herein is based upon sources we consider to be reliable; we do not, however, guarantee its accuracy.

T. Rowe Price semi-transparent ETFs: These ETFs publish a daily Proxy Portfolio, a basket of securities designed to closely track the daily performance of the actual portfolio holdings. While the Proxy Portfolio includes some of the ETFs holdings, it is not the actual portfolio. Daily portfolio statistics will be provided as an indication of the similarities and differences between the Proxy Portfolio and the actual holdings. The Proxy Portfolio and other metrics, including Portfolio Overlap, are intended to provide investors and traders with enough information to encourage transactions that help keep the ETF's market price close to its NAV. There is a risk that market prices will differ from the NAV. ETFs trading on the basis of a Proxy Portfolio may trade at a wider bid/ask spread than shares of ETFs that publish their portfolios on a daily basis, especially during periods of market disruption or volatility and therefore, may cost investors more to trade. The ETF's daily Proxy Portfolio, Portfolio Overlap and other tracking data are available at [troweprice.com](https://www.troweprice.com).

Although the ETF seeks to benefit from keeping its portfolio information confidential, others may attempt to use publicly available information to identify the ETF's investment and trading strategy. If successful, these trading practices may have the potential to reduce the efficiency and performance of the ETF.
